

GET ON BOARD WITH APIs

Automatically connect with 95% of the LTL shipment volume in North America

Would you rely on a phone or computer from 40 years ago to get the job done? Many 3PLs, shippers, brokers and carriers still rely on EDI technology – first developed in the 1970s – for managing integrations and communications with partners.

EDI may be a “good enough” tool for now, as long as you can dedicate people to check for errors and wait the extra time for tasks to get done. Not to mention the translation that’s needed in order to make communications from disparate sources useful.

But who has that time?

APIs are an entirely new way of connecting

API technology takes a completely new approach to connecting many different systems with a TMS, including those from 3PLs, shippers, brokers and carriers. There’s no need for the “middleman” technology that an EDI requires. Instead, APIs create a direct connection between parties for instant data exchange.

“The ease of integration was the number one reason we chose 3Gtms. The experts at 3Gtms built an integration hub that’s unbelievably reliable. And the faster we get integrated, the faster we save money and our customers start saving money.”

–Jeff Auslander,
Dynamic Logistix

- Standardized communications between parties eliminates the need for translating data
- Real-time communications enable live order rating and faster decision making
- Modern technology automates tasks like tendering and freight bill auditing

With 3Gtms, you automatically receive pre-established API connections with dozens of LTLs that cover more than 95% of the LTL shipment volume in North America so you can immediately take advantage of API benefits. Plus, our hub-and-spoke design allows you to integrate once and connect everywhere for incredible ease, speed and agility.

- Increased automation saves significant time and cuts the need for manual intervention, maintenance and translation
- Easily connect and compare carriers to find the best shipping options
- Exchange data instantly and complete tasks in a fraction of the time
- Partnerships with API technology leaders ensure you are covered for any connection you need
- Our built-in self-service tool allows you to integrate carriers on your own timeline, without relying on us

While the competition is wrestling with obsolete tools, you can leverage the power of APIs to lower your operating costs, speed up your tasks and make life easier for your team and partners!

WE ARE A DIFFERENT KIND OF TMS

Transportation execution is the glue that holds your supply chain together. Created for brokers, shippers, carriers and logistics service providers, our uniquely designed TMS manages all activity from planning and optimization through rate management, integration, execution and payment.

Fundamentally Different

An architecture and design distinct from anything else on the market.

Most Flexible

The power to self-configure; unique routing concepts; proprietary algorithms.

Highest Satisfaction Rate

The happiest customers and highest retention rate in the industry.
